THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lewis Lee on July 23, 2008.

The application has been amended as follows:

In the Claims:

Claims 1, 8, 9, 11 and 71 are amended.

1. A method of creating a clinical reference solution that models clinically relevant sites on genes responsible for human genetic conditions, wherein the clinical reference solution is substantially free of clinically irrelevant nucleic acid, comprising:

for each clinically relevant site, designing an oligonucleotide comprising an arrangement of bases to model the clinically relevant site as isolated from clinically irrelevant nucleic acid that occurs adjacent to the corresponding clinically relevant site in vivo, including designing two ends of the arrangement to form primer targets for differentially amplifying the modeled clinically relevant site;

for each arrangement, performing a synthesis that includes constructing base-by-base, from end to end, a single strand of bases comprising the arrangement of bases

that models the clinically relevant site and forms the primer targets associated with the clinically relevant site; and

mixing each single strand into a single solution to form a collection of oligonucleotides, each representing a clinically relevant site of a gene.

8. The method as recited in claim 1, wherein:

each modeled clinically relevant site has an associated primer set, and wherein:

the reference solution is tuned for a specific battery of clinical tests by differentially amplifying the different modeled clinically relevant sites to different concentrations in the reference solution.

9. The method as recited in claim 8, wherein different groups of the modeled clinically relevant sites in the reference solution have associated primer sets such that each different group of modeled clinically relevant sites is amplified independently.

11. The method as recited in claim 9, wherein independently amplifying each of the groups of modeled clinically relevant sites includes controlling a physical characteristic of the reference solution to favor an amplification capability of one primer set over an amplification capability of another primer set.

71. A method for tuning concentrations of different reference nucleic acids within a clinical reference solution, comprising:

designing multiple reference nucleic acids, wherein each reference nucleic acid comprises an arrangement of bases modeling a clinically relevant site on genes responsible for human genetic conditions exclusive of clinically irrelevant human nucleic adjacent to the clinically relevant site in vivo;

for each reference nucleic acid in a first subset of the multiple reference nucleic acids, constructing an oligonucleotide comprising an arrangement of bases to model the clinically relevant site as isolated from clinically irrelevant nucleic acid that occurs adjacent to the corresponding clinically relevant site in vivo, including designing two ends of the arrangement to form a first pair of primer targets allowing PCR amplification of the first subset via a primer set specific to the first pair of primer targets;

for each reference nucleic acid in a second subset of the multiple reference nucleic acids, constructing an oligonucleotide comprising an arrangement of bases to model the clinically relevant site as isolated from clinically irrelevant nucleic acid that occurs adjacent to the corresponding clinically relevant site in vivo, including designing two ends of the arrangement to form a second pair of primer targets allowing PCR amplification of the second subset via a second primer set specific to the second pair of primer targets; and

wherein each oligonucleotide in the first and second subsets is constructed base-by-base, from end to end, as a single strand.

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: In view of the amendments, the claimed invention is novel and unobvious over the prior art of Gordon, Chenchik and Strizhov. In particular, no prior art was found that teaches or suggests a method of creating a clinical reference solution comprising, for each clinically relevant

site, designing an oligonucleotide comprising an arrangement of bases that models the clinically relevant site as isolated from clinically irrelevant nucleic acid, including designing two ends of the arrangement to form primer sites and performing a synthesis base-by-base, from end to end, of a single strand of bases for each arrangement that models the clinically relevant site and forms the primer targets, and mixing each single strand into a solution to form a collection of oligonucleotides, each representing a clinically relevant site of a gene.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany an issue fee. Such admissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David C. Thomas whose telephone number is 571-272-3320 and whose fax number is 571-273-3320. The examiner can normally be reached on 5 days, 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Benzion can be reached on 571-272-0782. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
